Nature of Operations

Exchange Bank of Canada (the Bank, EBC) was originally incorporated as Currency Exchange International of Canada Corp. (CXIC) under the Canadian Business Corporations Act on October 6, 2011. The Bank submitted its application in November of 2012 to continue as a Schedule I bank and in September of 2016, the Office of the Superintendent of Financial Institutions (OSFI) and the minister of finance issued letters patent for the Bank. The Bank is a non-deposit-taking, non-lending financial institution engaged in the service of providing currency exchange services to domestic and foreign banks, corporations, and other financial institutions.

The Bank is a wholly owned subsidiary of Currency Exchange International, Corp (CXI). CXI is a public corporation whose shares are listed and posted for trading on the Toronto Stock Exchange (TSX) under the symbol "CXI", and the Over-the-Counter Market (OTCQX) under the symbol "CURN."

In 2024, CXI established a special committee of the board of directors to carry out a strategic review of EBC's operations. Effective the second quarter of 2025, On February 18, 2025, CXI announced its decision to discontinue the operations of the Bank and its intention to apply to the Minister of Finance in Canada to discontinue from the Bank Act. Pursuant to CXI's decision, the Board of Directors approved a strategy (Exit Strategy) to pursue an orderly cessation of EBC's operations and exit from Canada with an initial estimate to complete the cessation of EBC's operations by the end of fiscal 2025 and to discontinue from the Bank Act thereafter, subject to regulatory approvals.

Capital Framework

The Basel Committee on Banking Supervision ("BCBS") is an international forum for regular cooperation on banking supervisory matters. Basel III is a global regulatory capital and liquidity framework developed by the BCBS and is composed of the following three pillars:

1. Pillar 1 addresses capital and liquidity adequacy and provides minimum requirements;
2. Pillar 2 outlines supervisory monitoring and review standards; and
3. Pillar 3 promotes market discipline through prescribed public disclosures.

In Canada, the Office of the Superintendent of Financial Institutions ("OSFI") implements the Basel III framework through the (i) Capital Adequacy Requirements ("CAR"); (ii) Leverage Requirements ("LR"); (iii) Liquidity Adequacy Requirements ("LAR"); (iv) Small and Medium-Sized Deposit-Taking Institution ("SMSB") Capital and Liquidity Requirements; and (v) Pillar 3 Disclosure Guideline for SMSBs Capital and Liquidity Requirements.

The Bank was established as a non-deposit taking and non-lending Schedule 1 Bank, regulated by OSFI. For capital adequacy and liquidity purposes, the Bank is classified as a Category 2 SMSB. Based on CAR, LR, LAR, and the SMSBs Capital and Liquidity Requirements, the Bank applies the standardized approach to credit risk, Simplified Standardized Approach ("SSA") to operational risk, and the Standardized Approach to Counterparty Credit Risk ("SACCR"), to calculate Risk Weighted Assets ("RWA"). The Pillar 3 Disclosure Guideline for SMSB's Capital and Liquidity Requirements requires the Bank to publicly disclose relevant disclosures to ensure stakeholders have access to key risk information that would enable them to gain a fundamental understanding and knowledge of the Bank's activities.

Unless otherwise noted, all amounts are in Canadian Dollar ("CAD").

Additional information is available here:

84	Current cap on Tier 2 instruments subject to phase-out arrangements	-
85	Amount excluded from Tier 2 capital due to cap (excess over cap after redemptions and maturities)	-

Summary of Results

In the three-month period ended July 31, 2025, revenue decreased by 45% compared to the same quarter in the prior year, as revenue in the Banknotes and Payments businesses decreased by 24% and 82%, respectively. The overall decrease in revenue is attributable to customer offboarding as a result of EBC's Exit Strategy, where all Payment activity ceased during the period and Banknote activity began to taper from the previous quarter.

The Bank's operating expenses decreased by 33%, as compared to the same quarter in the prior year, due to reduced personnel costs in the current period as a result of EBC's Exit Strategy and the initial provision recorded for the FINTRAC penalty in the same period the prior year.

In the three month period ended July 31, 2025, the Bank reported a net loss of \$1.04 million, compared to a net loss of \$1.65 million for the same period in the prior year. The year-over-year improvement reflects the impact of the initial provision recorded for the FINTRAC penalty in the prior year, in addition to reduced personnel costs and a net benefit received from the cancellation of a long-term lease liability in the current period.

The Bank maintains adequate capital in adherence to its regulatory requirements. The Bank manages its capital position through ongoing assessments as part of its capital management framework.

Risk Management Objectives, Structure, and Policies

As a result of the Bank's Exit Strategy, its overall risk profile and exposures have decreased in the current period and are expected to be reduced entirely in some categories prior to October 31, 2025. The Bank's activities have exposed it to a variety of financial and non-financial risks such as, but not limited to, credit risk, foreign currency risk, interest rate risk, and liquidity risk. The Bank's risk management policies are designed to minimize the potential adverse effects on the Bank's financial performance. Risk management oversight will continue through the cessation of operations under policies approved by Senior Management and the Board of Directors. Information regarding the Bank's exposure to material risks and the Bank's objectives, policies, and processes for measuring and managing these risks is outlined below.

The Bank's activities have exposed it to the following risks:

- Regulatory Compliance risk

- Concentration risk
- Counterparty Credit risk
- Credit risk
- Cybersecurity Risk
- Foreign currency risk
- Interest rate risk
- Liquidity risk
- Operational risk, including fraud risk

Regulatory Compliance Risk

Regulatory compliance risk is the risk of potential non-compliance with laws, regulations, and prescribed practices in the jurisdictions in which the Bank operates. Issues regarding compliance with laws and regulations can be associated with privacy, market conduct, consumer protection, business conduct and money laundering. In conducting its business, the Bank is subject to regulatory examinations and inquiries and may, at any given time, be subject to the payment of additional charges as a resolution of matters arising from these examinations or other non-compliance matters.

Compliance policies and procedures have been developed to enable the Bank to manage regulatory compliance risk. The Bank has an established regulatory compliance management framework which outlines how it manages and mitigates the regulatory compliance risks associated with potential non-compliance with regulatory requirements and changing laws and regulations as applicable.

Concentration Risk

As part of EBC's Exit Strategy, all customers are slated to be offboarded by September 30, 2025, all vendor obligations are due to be settled prior to October 31, 2025, and only basic operating bank accounts will remain open until EBC discontinues from the Bank Act following regulatory approval.

Concentration Risk has been eliminated as a result of EBC's Exit Strategy.

Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows, resulting in an economic loss to EBC. Unlike the one-sided exposure to CR, CCR introduces a two-sided exposure to potential losses. This is due to the market value component of derivative transactions, which can fluctuate positively or negatively for either counterparty of the transaction. The market value is uncertain and can vary over time with the movement of underlying market factors.

EBC applies SACCR for Over the Counter ("OTC") foreign exchange derivatives to compute the RWA calculation for counterparty credit risk.

As a result of EBC's Exit Strategy, the Bank's CCR has significantly reduced in the current period and is expected to be eliminated prior to October 31, 2025.

The details are illustrated in the table below:

<i>In thousands of Canadian dollars</i>		a	b	b	d	E	f
		Replacement cost	Potential future exposure	Effective EPE	Alpha used for computing regulatory EAD	EAD post-CRM	RWA

Credit Risk

Credit risk is the risk of financial loss associated with counterparty's inability to fulfill its payment obligations. The Bank's credit risk has been primarily attributable to cash in bank accounts, accounts receivable, and forward contracts from hedging counterparties.

With the offboarding of customer relationships and the reduction of operational activity as part of EBC's Exit Strategy, EBC's credit risk has significantly reduced in the current period. This exposure is expected to remain minimal throughout EBC's discontinuance, where the remaining exposure is attributable to cash balances in bank accounts.

Cybersecurity Risk

This is the risk of the potential harm or damage that can occur due to vulnerabilities or threats to EBC's information technology systems, networks, and data. It encompasses the possibility of unauthorized access, disruption, alteration, or destruction of digital assets, including sensitive customer information, financial data, intellectual property, and operational systems.

As a result of EBC's Exit Strategy, with the offboarding of customers and the significant reduction in transactional activity, the Bank's Cybersecurity Risk has reduced in the current period and is expected to be significantly reduced by October 31, 2025, and eliminated upon discontinuance from the Bank Act.

Foreign Exchange Risk

The volatility of the Bank's foreign currency holdings may increase as a result of the political and financial environment of the corresponding issuing country. Management mitigates its exposure to foreign currency fluctuations through a layered risk management strategy that includes forward hedges and selective use of purchased options. Due to their nature, some exotic currencies cannot be hedged or are too cost prohibitive to hedge. These exposures are managed to acceptable risk appetite levels using a historical Value-at-Risk (VaR) methodology. Foreign currency exposure, in the form of exchange gains and losses arising from normal trading activities and business operations, are included in operating expenses for the period.

Foreign exchange losses (gains) represent the net result after considering hedging and risk management strategies designed to reduce the inherent risks in the Bank's exposure to foreign exchange, thereby minimizing volatility in earnings. Due to the unpredictable nature of foreign exchange markets, Management cannot reliably predict future movements in foreign currency valuations, and therefore hedges the Bank's exposures in a consistent and prudent manner in alignment with the Bank's FX Policy. As a result, Management employs a layered approach to managing its exposure to foreign exchange in major currencies through a combination of foreign currency forward contracts and a selective use of purchased put option contracts. Results after hedging vary each period and are largely driven by the magnitude of banknote holdings in certain currencies. Net results are seldom neutral because of the costs linked to hedging, which include forward point differentials on forward contracts and premiums on purchased options. The Bank does not hedge its exposure to exotic currencies as there is generally no established hedging market or the cost of hedging those currencies is prohibitively high. Variations in these unhedged exposures may lead to fluctuations in results each period.

As a result of EBC's Exit Strategy, the Bank's foreign currency holdings reduced in the current period and are expected to be eliminated prior to October 31, 2025.

Interest Rate Risk

At July 31, 2025, the Bank had access to interest-bearing financial instruments in cash and lines of credit. A portion of the Bank's cash is held as foreign currency bank notes on consignment and in its own vaults. These amounts are not subject to interest-rate risk. Cash held in some of EBC's bank accounts are interest bearing. The Bank is subject to an insignificant amount of-cash flow interest-

rate risk from the borrowings on its lines of credit, as borrowings remained low in the current period and are expected to be eliminated prior to October 31, 2025.

Liquidity Risk

Liquidity risk is the risk of the Bank incurring losses resulting from the inability to meet payment obligations in a timely manner when they become due or from being unable to do so at a sustainable cost. To manage liquidity risk effectively, the Bank has implemented preventative measures, including setting a Liquidity Coverage Ratio target of 120% or greater, which measures the proportion of unencumbered highly liquid assets to short-term net cash outflows, and setting a minimum liquidity balance requirement of total available cash or undrawn lines of credit to be greater than \$3,200,000 notional daily. As required, the Treasurer and CFO report any liquidity issues to the CEO, CRO, and the audit, conduct and review committee in accordance with established policies and guidelines. Management has assessed the Bank's cash position at July 31, 2025, and determined that it is sufficient to meet its financial obligations.

Operational Risk

Operational risk is the risk of loss resulting from ineffective or failed internal processes, people, systems, or external events that can disrupt the flow of business operations. Operational risk can be divided into risks from internal or external factors or events. While EBC's operations have begun to taper in the current period and are expected to cease prior to October 31, 2025, the Bank will continue to comply with Operational Risk Management Governance and Oversight requirements throughout its discontinuance.

EBC's Operational Risk Management Program is a continuous assessment of its risk and control environment as described in the following diagram below:

Additionally, the 3rd line of defense, the internal audit function, provides an objective review and testing of the Bank's operational risk management controls, processes, systems, and of the effectiveness of the first and second line of defense functions.

Risk Identification and Assessment

The purpose of Risk Identification and Assessment is to identify current and emerging operational risks and evaluate their impact on EBC's operations. The following tools are used for this process:

1. Risk Taxonomy: Risk maintains a Risk Taxonomy for financial and non-financial risks relevant to the Bank.
2. Top Risk and Emerging Risk Report: Risk, in conjunction with Senior Management, identifies key risks for the Bank, on an ongoing basis.
3. Risk and Control Self-Assessment (R&CSA): The Business (or First Line of Defense) conducts risk and control self-assessments to identify all risks inherent in their operations and all Change Management initiatives ("CMIs")
4. Business Process Mapping: Departments maintain business operating procedures detailing activities performed by operations as narratives or/and flowcharts, which are useful for identifying operational risks and mitigating controls in business processes.

Risk Measurement

EBC uses the following risk measurement tools to document and or quantify its risks:

1. Event Management: All operational risk events (including gain events and near misses) and industry relevant external events are identified by managers and recorded in a centralized repository. The information gathered is systematically tracked and analyzed including cause, control failure, lessons learned, preventative action plans to objectively understand the Bank's exposure to operational risk.
2. Capital Calculation: On a quarterly basis, the RWA calculation applies the SSA to calculate the RWA for operational risk.
3. Scenario Analysis: The Internal Capital Adequacy Assessment Process ("ICAAP") includes assessment of various scenarios significantly impacting the Bank's capital and its ability to successfully execute its strategy.

Risk Monitoring and Reporting

EBC monitors and reports on risks on a regular basis against the RAS. Risk reports to the MRC monthly or ad hoc (significant changes in the risk profile) to its members, as required. The CRO reports to the Risk Committee on a quarterly basis or ad hoc, as

required.

1. Risk Reporting: The CRO monitors risk levels to ensure a timely review of risk positions and exceptions.
2. The key components (not limited to) of these reports will include:
 - Top risks in the operating environment
 - Emerging risks for the Bank
 - Risks accepted outside EBC's RAS
 - Operational risk events (including near misses)
 - Key Risk Indicators ("KRIs")
 - Scenarios
 - Change management initiatives
 - Credit risks and exceptions
 - Regulatory environment issues
 - Other relevant business matters

All risks must be managed and can be optimized within the RAS approved by the Board. Treatment of risk can also include insurance of risk or acceptance of risk, as avoiding risk is not an option.

Policies, Framework, Guidelines

The CRO of the Bank has developed an Operational Risk Management ("ORM") Policy to provide a framework and approach for managing operational risks, including processes and control activities, for the various sources of risk present in the operations of the Bank. The Bank's Risk Management Framework ("RMF") includes:

- Board of Directors' approved Risk Appetite Statement ("RAS");
- Policies and procedures implemented to provide reasonable assurance that all material operational risks are identified, measured, monitored, reported, and supported by adequate capital;
- Utilization of operational risk management tools such as risk assessments, operational risks event analysis, scenario analysis etc. to mitigate operational risks for the Bank;
- Centralized repository to report, monitor, and manage operational risk events;
- Periodic risk reporting to appropriate stakeholders;
- Continuous oversight through risk focused committees and governance structure; and
- Implementation of the three lines of defense model to clearly articulate the roles and responsibilities of each line of defense stakeholders.

Governance

The Board of Directors is responsible for the oversight of the Bank's risk management, delegating the primary responsibility to the CRO. The Bank's Senior Management, with oversight from the Board of Directors, is focused on ensuring best practices are implemented in both operations and compliance with a strong focus on risk, business planning, and capital management.

Operational Risk Mitigation and Controls

The Bank's appetite and tolerance for operational risk is low. Therefore, all appropriate measures are taken towards achieving a high level of operational risk awareness and establishing a rigorous operational risk management system. To ensure that all applicable risks are identified, assessed, monitored, and reported:

- The CRO, in consultation with Senior Management, designs, implements and manages the Bank's ORM strategy and framework;
- The Bank uses various tools, as detailed in OSFI's Guideline E-21: Operational Risk Management, to recognize and understand existing risks and consider risks that may arise from new business initiatives, external market forces, or regulatory or statutory changes;
- A common taxonomy is used to promote consistent risk identification and assessment activities across the Bank;
- Centralized repository is used to report, monitor, and manage operational risk events;
- The first line of defense designs and implements controls, regularly performs operational risk monitoring activities, promptly detect and report deficiencies in the policies, procedures, and processes, and propose corrective actions;
- The CRO monitors risk thresholds to review risk positions and exceptions, in a timely manner;
- Risk Assessments are undertaken by the first line of defense, to identify key risks relevant to the Bank and control assessments provide reasonable assurance on the design and operating effectiveness of the controls currently in place to mitigate those risks; and
- The CRO periodically reports on the risk environment, detailing all material risks and compliance with the ORM Policy, to the MRC, the Board of Directors, and the Risk Committee of the Board of Directors.

Operational Risk Charge

For capital adequacy purposes, the Bank uses the SSA to calculate the operational risk charge for the RWA calculation.

<i>In thousands of Canadian dollars</i>	Year A*	Year B*	Year C <i>Latest 4 Quarters</i>
